Product: Private Wire Client, Network Trapping version

Subject: Problem with MSDUN 1.3

## Description:

Installing **MSDUN 1.3** (Microsoft dial up networking update) from the PrivateWire CD-ROM on a desktop may cause a malfunction during operation.

The malfunction occurs on desktop having **Windows 95 Hebrew** or **Hebrew enabled** plus PrivateWire Client, **Network Trapping version**.

The activation of the menu: Start->Setting->Control Panel ->Network, generates a Windows error message "**GPF**".

## Workarounds & Solutions:

In the PrivateWire CD-ROM, under the directory CLIENT\MSDUN13\FILES there are 2 files named **Netdi.dll** and **Setupx.dll**.

The solution is to copy these 2 files in DOS mode (NOT in DOS under WINDOWS 95) into the directory X:\windows\system and restart the computer.

X represents the drive contains the Windows 95 platform.
